

Kick

Managed Firewall Service

Next-Gen Threat Detection & Support Powered by **FORTINET**.

Kick's Managed Firewall offering uses next generation applications from Fortinet to deliver best-in-class perimeter security. We fully manage the firewall ensuring it is always up-to-date and providing 24/7 protection.

This device provides defence against malicious attacks, providing advanced application-level security for networking, threat prevention and management whilst delivering predictable performance.

Subscription Management

/ Threat Prevention - goes beyond a traditional intrusion prevention system (IPS) to prevent all known threats across all traffic in a single pass without sacrificing performance.

/ Advanced URL Filtering - provides best-in-class web protection while maximising operational efficiency with the industry's first real time web protection engine and industry-leading phishing protection.

/ DNS Security - harness the power of Machine Learning (ML) to detect as well as prevent threats over DNS in real-time and empowers security personnel with the intelligence and context to craft policies and respond to threats quickly and effectively.

Features and Benefits

- / Identify and categorise all applications, on all ports, at the time, with full Layer 7 inspection scanning.
- / Prevent malicious activity concealed in encrypted traffic.
- / Detect and prevent advanced threats with cloud-delivered security services.
- / Centralised management and visibility.

Kick's Responsibilities

- / Creation of rules to control traffic to known URL categories.
- / Enable web browsing and security policies for groups of users.
- / Block .exe and malicious filetypes at the perimeter.
- / Regular Health Checks
- / Manage hardware warranty incidents.
- / Update firmware and software revisions.
- / Manage subscriptions.
- / Maintain and update rule base as required.

Why choose Kick ICT?

KickSecure's service is a strategic choice for navigating cybersecurity complexities, offering proactive security management.
