Kick

Managed Patching & RMM Service

Proactive Care, Seamless Operations: Your IT, Always Updated and Monitored

Empower your IT infrastructure with Kick's Managed Patching & RMM, powered by N-able N-central. This comprehensive service is designed to streamline your patch management processes and enhance your overall IT operations efficiency, ensuring your systems are always up-to-date and securely monitored.

Features and benefits

/ Automated Patch Management: Automate the deployment of software patches, ensuring that your systems are protected against vulnerabilities with minimal downtime.

/ Comprehensive RMM Capabilities: Leverage N-able N-central to monitor and manage your IT infrastructure remotely, ensuring peak performance and proactive issue resolution.

/ Customisable Reporting: Gain insights into your IT environment with custom reports tailored to your business needs, providing visibility into system health, performance, and security.

/ One Click Remote Access to Endpoints and Servers: Benefit from Kick's RMM platform by having quick remote access to all your desktops, laptops and servers.

/ Secure Infrastructure: Enhance your security posture with regular updates and patches for your software and systems, mitigating risks and protecting your data.

Service offerings

/ Setup & Configuration: Complete setup and configuration of N-able N-Central, customised for your IT needs.

/ Monitoring and Management: Continuous system monitoring with automated alerts and runbook remediation for optimal operation and security.

/ Patch Deployment: Efficient patch management across your network to ensure compatibility and minimise disruptions. Patching can be automated to fit the profile of your business minimising disruption to systems and improving system uptime.

/ Third Party Application Patching: Our service patches 100 third party applications including all major browsers and other commonly used applications.

Why choose Kick ICT?
